Modern door locking systems from KFV.

No doubt about it: nobody can come in without being invited, because our doors are produced using the innovative security technology of KFV. From mortise locks to electronically controlled multiple locking systems - we have the right individual and reliable solutions for both private and commercial buildings. We are the leaders in the field, and can give you 5 good reasons that will make your door more secure.

Reliable! FCV locking cylinder

The perfect, safe combination, together with KFV multiple locking Guaranteed. On request

- including anti-drilling protection on outside of door.
- including pull-out protection.
- including additional ball lock.
- including panic and safety function.

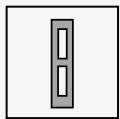

4

No worries! KFV security locking plates.

To match your door frame.

- We use only locking plates that are secure against break-in (ask your specialist dealer about this subject).
- Continuous locking bars with multiple locking.
- Greater resistance against levering out.
- More attractive design.

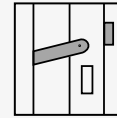

5

2

No risk! TSH door gap protection

That means opening the door without any risk.

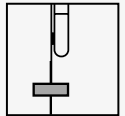

- TSH means additional protection you can rely on.
- No spy-hole necessary.
- No chain required.
- No scratches or scrapes from the chain.
- No extra key required, since locking and unlocking takes place via the main lock.

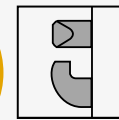

3

Guaranteed! Hinge-side security.

Yet another reason why nobody can come in without being invited. The hinge-side security design has interlocking teeth, making it almost impossible to break open the door on the hinge side.

1

Safe as houses! The KFV multiple locking system

- Attempts at breaking in will remain nothing more than attempts.
- Noise is kept outside where you cannot hear it.
- Heat remains in the room.
- Improved draught protection.

Further information on securing doors against break-ins is available free of charge from any police advice centre.
