The electronic locking system

Fliethomatic®

Secure is secure.

KFV  The Protection Company

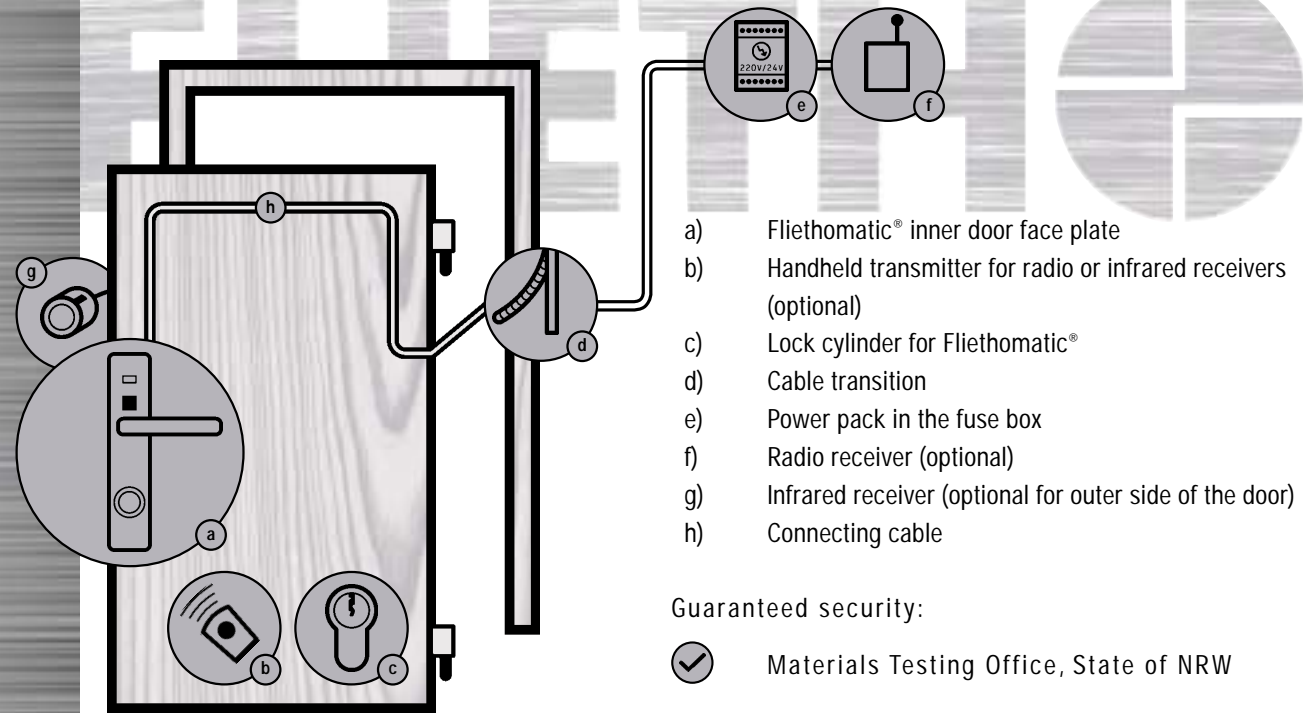

The Fliethomatic®: Security at the Push of a Button

The contemporary locking system with which your entrance door is unlocked and locked electronically as in modern cars – by remote control. Keys are unnecessary. The mechanism is hidden safely behind the inner door face plate. It ensures optimum protection against tampering. With its powerful motor, the Fliethomatic® is able to ensure optimum locking even in combination with multi-point locks.

FLIETHOMATIC®

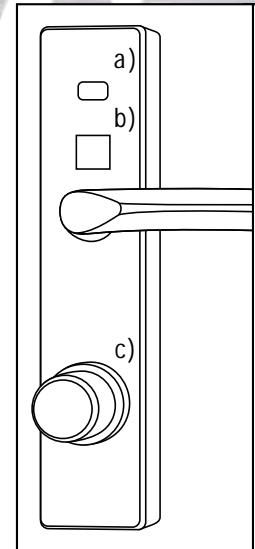

- a) Fliethomatic® inner door face plate
- b) Handheld transmitter for radio or infrared receivers (optional)
- c) Lock cylinder for Fliethomatic®
- d) Cable transition
- e) Power pack in the fuse box
- f) Radio receiver (optional)
- g) Infrared receiver (optional for outer side of the door)
- h) Connecting cable

Guaranteed security:
 Materials Testing Office, State of NRW

The Fliethomatic®: Three systems for all cases.

- a) Control diodes
- b) Unlocking push-button
- c) Turn knob

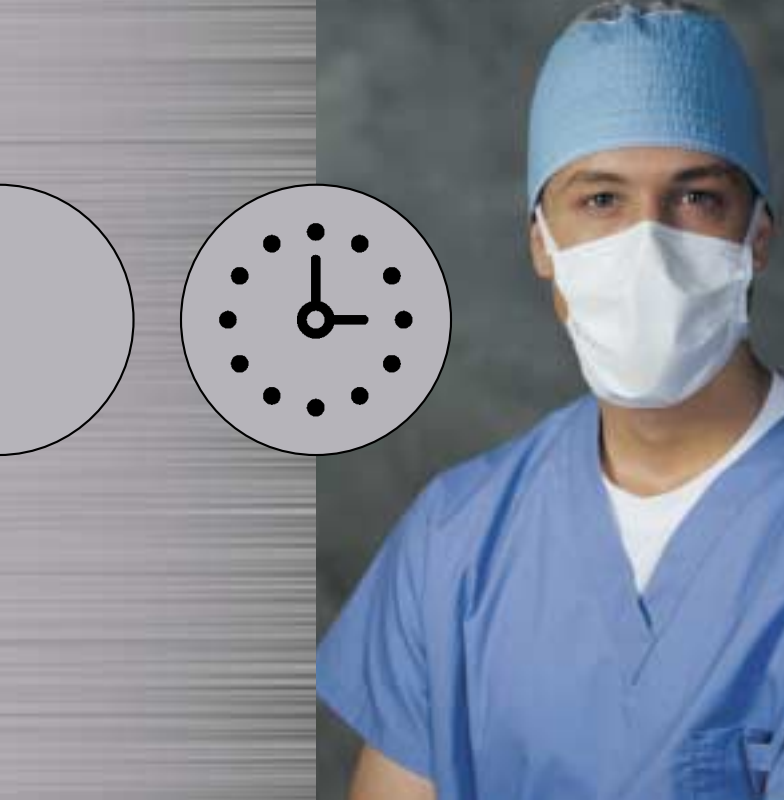

In the event of an emergency
 The Fliethomatic® is functional also in the case of a power failure and can be opened externally with a key and internally by turn knob.

Fliethomatic® Basic
 Provides for automatic locking after closing the door. You will still need a key only for unlocking. Optionally there is the Basic version also with radio remote control.

Fliethomatic® Classic
 Provided with an infrared remote control. With that you can also automatically open the door again, which has previously locked automatically. Completely without keys.

Fliethomatic® Esprit
 Additional comfort, additional security. The infrared remote control of the Esprit has two buttons: One for the unlocking and one for locking. You determine when the door is locked.

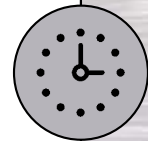

The Fliethomatic®: For office and practice.

Modern security.

Perfect timing: The time-controlled Fliethomatic® never forgets to lock itself. Thanks to day and night operation, it is best suited for areas with significant amounts of public or patient passage.

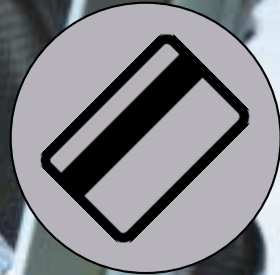

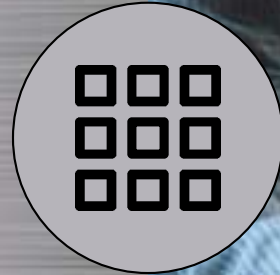

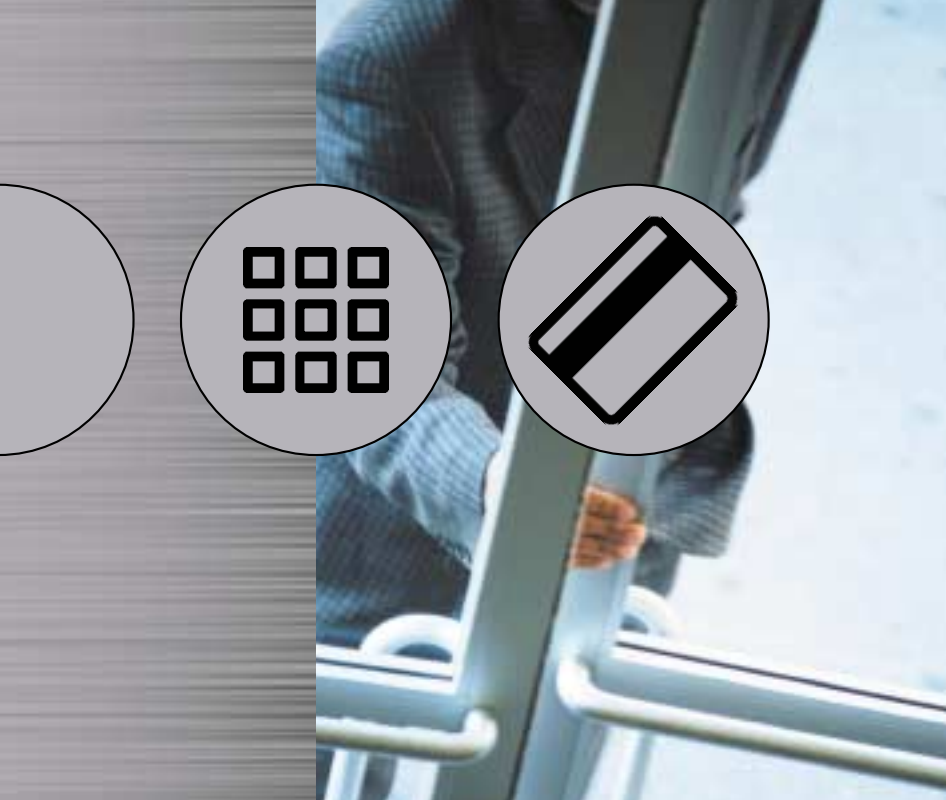

In association with a time switch clock, individual locking and opening times can be determined.

For example: During the day, entry by pushing a button. At night the door is locked automatically after closing – and you can simply forget about always having to remember to lock up!

Components: Fliethomatic®
Basic, Classic or Esprit and optional
time switch clock.

FLIETHOMATIC®

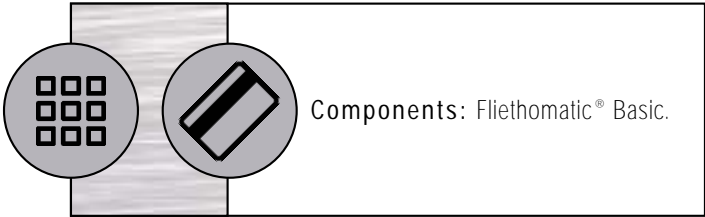

The Fliethomatic®: For entrance control systems.

Automatically locked.

Doors, which can be opened by means of keyboard and magnetic card systems, can also be automatically locked again with the Fliethomatic®.

The Fliethomatic® can be combined and controlled with all external control systems.

For example: Access to a room is implemented with a magnetic card. The unlocking occurs electronically. After closing the door, the Fliethomatic® locks automatically.

FLIETHOMATIC®

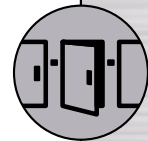

The Fliethomatic®: as a locking system.

Checked access.

Your company secrets should also remain secret. With the installation of a Fliethomatic® system, you create the correct prerequisite for that.

An example: As the security manager of a company, you wish to make specific parts of buildings or entire building complexes on a factory site accessible only to particular groups of people. This is where the Fliethomatic® comes into its own, as it can handle up to 256 different handheld transmitters. You can change the access rights conveniently and at any time with the programming key. With this, you have an extremely flexible system which is modular and grows with your requirements.

Components: Fliethomatic®
Classic or Esprit.

FLIETHOMATIC®

The Fliethomatic®: For house and garage.

›Click‹ and it's locked.

May we offer something a little more luxurious? Then we recommend the Fliethomatic® for house entrance door and garage. With this, both the garage and the house entrance door can be conveniently opened and closed.

A press of the remote control suffices. The Fliethomatic® takes over the rest ...

Components: Fliethomatic® Basic, Classic or Esprit with optional radio or infrared receiver for garage doors.

FLIETHOMATIC®

→ The Fliethomatic®: for the elderly and disabled persons.

›Open Sesame!‹

That would be something: A house entrance door, that opens itself by the push of a button ... with the Fliethomatic® it's no problem!

By means of the Fliethomatic®, combined with an electric door actuator, every door is adjusted for elderly and disabled person operation.

With one push of a button, the door is released automatically, then opened wide by the door actuator. After entry, the door is closed automatically again and locked.

A fully-electronic system, which unites comfort and security.

Components: Fliethomatic®
Basic, Classic or Esprit, with electric door actuator.

FLIETHOMATIC®

The Fliethomatic®: Control alarm systems.

A key position.

The Fliethomatic® can be optimally combined with an existing alarm system or outside perimeter protection. It takes over the central control of your house security components by means of the remote control of the house – and, for example, also shuts your window roller shutters.

With this, optimal security is guaranteed on leaving the house, since additional activation of any further devices can be dispensed with.

Components: Fliethomatic® Esprit
as a block lock variant.

FLIETHOMATIC®

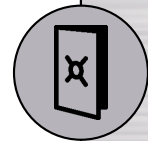

The Fliethomatic®: For locked area systems.

Checked access.

Access for authorised persons only! The Fliethomatic® system provides various means of implementing airlock systems for high security areas.

An example: After entering of the locked area, the first lock door closes automatically. The Fliethomatic® provides for an additional lock, which cannot be opened within the locked area. The second lock door, equipped also with a Fliethomatic®, can be opened only by radio by the security personnel.

Components: Fliethomatic® Basic for locked area systems.

FLIETHOMATIC®
