information?

The door of today is in great demand. Why not ask us for more

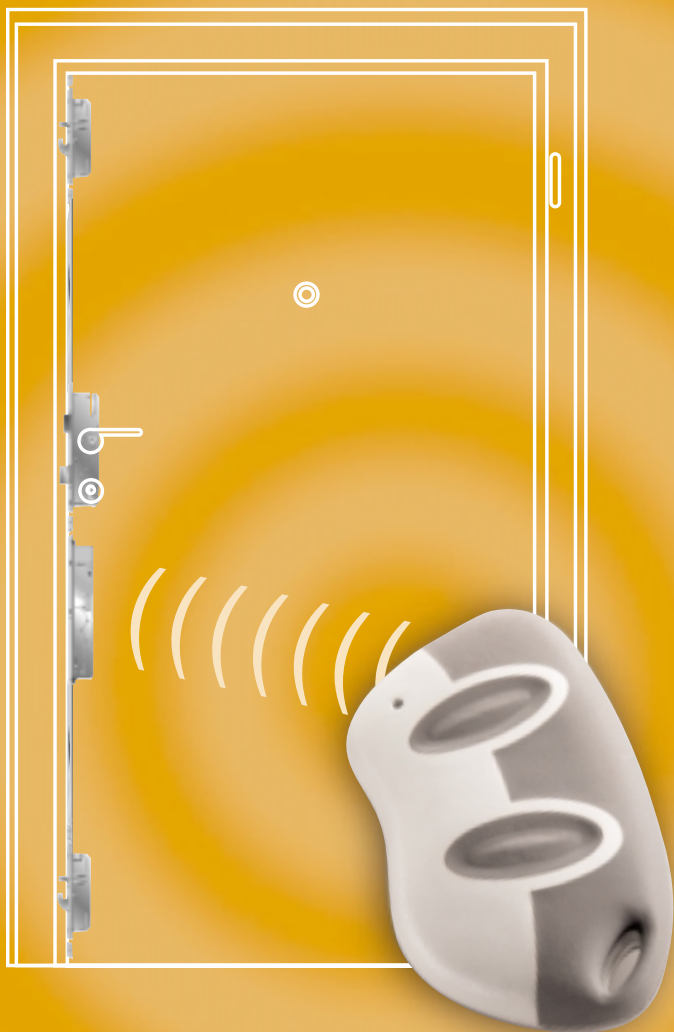

Genius is simple to install, just like a standard multipoint locking system.

Genius is available with a faceplate width from 16mm and a minimum backset of 35mm.

Genius is combined with a key-operated KfV multipoint lock, pre-assembled at the factory.

Ahead of their time.

Doors of today are no longer normal.

Doors of today are GENIUS secure. GENIUS simple.

GENIUS is new. An electro-mechanical special lock including multiple locking, which makes doors even more secure - meeting the needs of today.

GENIUS can be locked and unlocked automatically, even by remote control.

Available in two different operating modes.

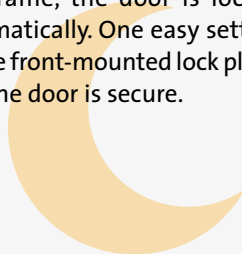

Fully automatic.

GENIUS is compatible with external access control systems. If required, the system can be operated by remote control or combined with a card and keypad access system, allowing GENIUS to be locked and unlocked automatically.

Night mode.

Every time the door closes into the frame, the door is locked automatically. One easy setting on the front-mounted lock plate, and the door is secure.

Day mode.

The door remains locked by the latch. If the door is to be locked, it is simply switched to the "safe function", using the switch on the front-mounted lock plate. Ideal for buildings with a high level of public usage.
